

## FAST: MAIN FEATURES AND USP's

**FAST** is a folding table designed by Carlos Tíscar, composed by two independent parts: a folding frame and a top.

The main **USP's** of FAST are:

- **Practical**
  - The system allows to combine the same frame with tops of different shapes and dimensions (rectangular, circular...).
  - The frame is folded and unfolded easily.
  - The assembly of the top with the frame is fast and easy. No tools needed to assembly the frame and top.
  - The frame and the tops can be stacked on a trolley to occupy the minimum space.
- **Versatile:**
  - It allows multiple configurations because the top and the frame are available in different shapes and dimensions.
  - It is possible to create compositions by joining the tables using the connecting piece.
  - There are different courtesy panel options.

### Materials:

- Frame: structure and legs in steel.
- Top: Compact or Melamine.

**Models:** tops can be rectangular, corner or round in different dimensions. Frames are suitable for each shape and dimension.

**Spaces** where fits perfectly:

- **Hotels:** multipurpose rooms that host wedding, banquets, conferences, exams...
- **Offices:** meeting rooms, rest areas, dining rooms...
- **Congress Halls**
- **Education facilities**, such as, schools, universities, libraries, museums...
- **Coworking spaces.**
- **Catering** companies.
